Removing Barriers, Integrating Research, Spreading Excellence

Satellite Communications Network of Excellence (SatNEx)

Removing Barriers to Integration.

Inter-dependency of Joint Programme of Activities

Jointly Executed Research

WP 2000 Jointly Executed Research covers visions and joint research and spreading of excellence. The consortium is made up by a well-balanced mix of higher education institutions and research organisations, including:

- Advancing European research in satellite communications
- To develop a common base of knowledge
- To establish a long-lasting, durable integration of European research
- To achieve this, the SatNEx partners have established a Joint Programme

SatNEx aims to establish a long-lasting, durable integration of European research in satellite communications under a single collaborative umbrella. The pan-European nature of the Network draws on expertise from across the European Research Area, with representatives from Austria, France, Germany, Greece, Hungary, Italy, Norway, Spain, and the UK.

The Joint Programme of Activities

SatNEx's goals programme is dedicated to these main areas of activity:

- WP 2000 Jointly Executed Research: to develop visions and joint research activities. They include research, integration and dissemination activities.
- WP 2100 Integrating Activities: to bring together the Network in a comprehensive, systematic, and collaborative manner.
- WP 2200 Jointly Executed Research: to develop visions and joint research activities. They include research, integration and dissemination activities.
- WP 2300 Jointly Executed Research: to develop visions and joint research activities. They include research, integration and dissemination activities.
- WP 2400 Jointly Executed Research: to develop visions and joint research activities. They include research, integration and dissemination activities.

SatNEx receives funding from the EU in the form of a grant for integration. The partners within the Network augment this funding with a substantial amount of additional self-funded work, which reflects the commitment of all participants to establish SatNEx as a long-lasting and durable Network.

Partners

To be a success, SatNEx aims to develop a sustainable model for dissemination and exploitation of the research outcomes. As such, SatNEx aims to develop and grow the Network by introducing new partners in detection, Europe and beyond. Potential new partners that can demonstrate excellence in satellite communications are encouraged to contact the Network Coordinator with an expression of interest.

Network of Excellence in Satellite Communications

SatNEx is a truly European joint European Network of Excellence (NetNEx) funded under the European Union’s Framework Programme 6 Information Society Technologies (IST) Area.

SatNEx is dedicated to strengthening scientific and technological excellence in particular research topics by a number of actions and initiatives. These include:

- Advancing European research in satellite communications
- To achieve this, SatNEx partners have established a Joint Programme
